TESTING

TEST	TEST CASES	EXPECTED RESULT	ACTUAL RESULT	CONCLUSION
Search CSV file for specific data and deletes the data	Get user input (code title) and check to see if it is in the CSV file using .include? and if it is delete it from CSV file	.include? will return a value of true	Returned false	I believe the problem is because I didn't iterate over each row of the CSV file
	Get user input (code title) and check to see if it is in the CSV file using .find and entering a block, if it is, delete it from the CSV	If user input is in the CSV, delete it	Deleted user input from CSV	Code working as intended
Search CSV file for specific data and edits the data	Get user input (code title) and check to see if it is in the CSV file - user input wasn't in the file	Error, code title not found	Error, code title not found	Code working as intended
	Get user input (code title) and check to see if it is in the CSV file - user input was in the file	Prompt user to enter a new code title, description and code snippet	User prompted to enter new code title, description and code snippet	Code working as intended
